🔐 Cryptography Project

A modern cryptography project focused on secure communication using encryption and decryption techniques. This project demonstrates fundamental cybersecurity and cryptographic concepts through practical implementation.

📌 Features

- Encrypt plain text securely
- Decrypt encrypted messages
- Multiple cryptographic algorithms
- User-friendly interface
- Secure data processing
- Educational implementation of cryptography concepts

🚀 Technologies Used

- Programming Language: Python / C++ / JavaScript
- Git & GitHub
- Cryptography Libraries (if used)

📂 Project Structure

```
cryptography-project/
│
├── src/
├── encryption/
├── decryption/
├── assets/
├── README.md
└── main.py
```

⚙️ Installation

Clone the repository:

```
git clone https://github.com/yourusername/cryptography-project.git
```

Move into the project folder:

```
cd cryptography-project
```

Install dependencies (if needed):

```
pip install -r requirements.txt
```

▶️ Usage

Run the project:

```
python main.py
```

Example:

- Enter text
- Choose encryption method
- Generate encrypted output
- Decrypt when needed

🔒 Cryptography Concepts Used

- Caesar Cipher
- AES Encryption
- RSA Algorithm
- Hashing
- Symmetric & Asymmetric Encryption

(Edit this section based on your actual project.)

📸 Screenshots

Add screenshots of your application here.

Example:

- Home Page
- Encryption Process
- Output Result

🎯 Project Goal

This project was created to practice and explore cryptography, cybersecurity fundamentals, and secure application development.

⭐ Future Improvements

- Add advanced encryption algorithms
- Improve UI/UX
- Add database integration
- Build web-based version
- Add authentication system
